March 2022.

Scope.

Picross has been established for 40 years. Located in Sussex, Picross manufactures and supplies precision-machined components to customer drawings and specifications in ferrous, non-ferrous and plastic materials. Machine facilities include CNC turning, CNC Milling and full conventional machining capabilities.

Picross Engineering also offers precision TIG welding, bead blast and powder coat paint facilities and assembly capability including electrical assembly. In addition we also have the facilities for pressure testing and vacuum leak testing.

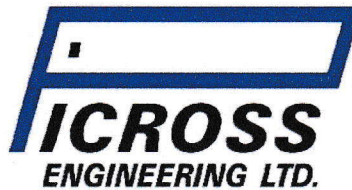

These services are all available on one site with support services in inspection, cleaning and packaging. All Picross services are detailed on its website and can be found at www.picross-eng.com

Picross Engineering has implemented and maintains a structured Quality Management System that complies with BS EN ISO 9001 and applies this standard to all our products and services.

As a subcontractor, design of products and services are not applicable to our Quality Management System.

March 2022

Quality Policy.

Picross Engineering aims to maintain and strengthen its reputation as a reliable and dependable supplier of precision engineered products and it is our intention to increase our customer base and be the leading firm in the South East providing our various engineering services.

Picross Engineering intends to use its wealth of knowledge and skills to enhance its customer satisfaction by consistently providing competitively priced quality products to customer requirements, delivered on time.

To effectively achieve this policy statement and the business objectives, the Company's Directors and senior management team are committed to implementing and maintaining a structured Quality management system that complies in all relevant aspects to BS EN ISO 9001. In addition the Directors and senior management team commit in the following ways: -

- Continual improvement of the effectiveness of the Quality Management System
- Conduct two Management reviews per year to ensure the continuing suitability and effectiveness of its Quality management system.
- Ensure our trained staff have the necessary tools and machinery
- Provide a safe and healthy work environment
- To attract and retain skilled staff
- Regular monitoring and improvement of our processes
- Continually seek to improve performance through ongoing investment in machinery and technology.
- Supporting and building relationships with suppliers
- Ensure this policy is communicated throughout the organisation.
